

Build your first useful website.

Open a working one-page neighbourhood club site on your laptop.

Build one thing

Check it works

Choose an extension

Before you start.

01

You already know

Modules 01–02. Know how to save a text file.

02

Open these tools

AI chat, a plain-text/code editor and a browser.

03

Check the requirement

Local preview needs no hosting account.
Publishing is a separate choice.

Your first small win.

Create one complete index.html for a fictional neighbourhood book club. Include a heading, three activities and a sample contact placeholder. Use crimson #E11021, ink #0A0A0B and near-white #FAFAFA. No external assets or forms. Return code only.

[Open copyable prompt](#)

What happens between input and output?

- 1 HTML holds the content. CSS controls the look.
- 2 A local file is a preview, not a published site.
- 3 Only publish facts and contact details you approve.

Step 01. Create a project folder.

- 1 Make a folder named my-first-website.
- 2 Open a plain-text editor.
- 3 On macOS TextEdit, choose plain text before pasting.

Step 02. Generate the page.

- 1 Copy the quick-win prompt into your AI tool.
- 2 Copy only the HTML code.
- 3 Remove opening and closing Markdown fences.

Step 03. Save and open.

- 1 Save as index.html, not index.html.txt.
- 2 Open the file in a browser.
- 3 Confirm the title and three activities appear.

Step 04. Make it yours.

- 1 Replace fictional text with approved practice details.
- 2 Ask for one layout change at a time.
- 3 Refresh after saving the file.

Step 05. Test the page.

- 1 Narrow the browser to phone width.
- 2 Check headings, contrast and keyboard focus.
- 3 Click every link; remove placeholder destinations.

Step 06. Decide about publishing.

- 1 Keep it local if it is only a prototype.
- 2 For a public site, choose a host and check its terms.
- 3 Review all facts and permissions before uploading.

Make the working version.

Improve this HTML into a responsive one-page club site. Keep existing facts. Use semantic headings, readable contrast and visible keyboard focus. No tracking, external dependencies or invented links. Explain where to edit the text. HTML: [paste].

[Open copyable prompt](#)

Ask for a review. Then check it.

Review my HTML for mobile layout, heading order, contrast, broken links and misleading claims. Give a short test checklist and exact changes. Do not invent test results. HTML: [paste].

[Open copyable prompt](#)

Prove your result works.

- 1 index.html opens without installation.
- 2 No horizontal scrolling at a narrow width.
- 3 All visible information is approved or labelled fictional.

When it does not work yet.

01

It shows code

Check the extension and open it in a browser.

02

No change appears

Save the correct file, then refresh the browser.

Choose your next challenge.

01

Core complete

Show one checked output to a partner.

02

Extension 1

Add a second page and a working navigation link.

03

Extension 2

Publish only after a separate review.

Keep the result. Keep the evidence.

Open a working one-page neighbourhood club site on your laptop.

Save your files

Save your prompt

Name the next change
